

ADU Cost Estimate — 657 Francis Ave

Construction-ready drawings and takeoff/estimate — Atlanta market ranges

Construction-Ready / Permit-Ready Drawing Set

Going from a concept sketch like this (massing + rough dims, no structural/MEP resolved) to a stamped, permit-submittable set typically runs:

Scope	Typical Atlanta cost
Architectural drawings (plans, elevations, sections, details)	\$8,000 – \$15,000
Structural engineering (calcs + drawings, PE stamp)	\$3,000 – \$6,000
Site plan / survey (needed for the setback variance on sheet 8)	\$1,500 – \$3,000
Total for full CD set	\$12,000 – \$24,000

Things that push this specific set toward the high end of the range:

- The variance request (2' vs required 5' setback) adds a review/hearing step architects usually price separately.
- "Final height TBD" and unresolved details (weatherproofing at the exterior stair/office nook, trellis structural attachment) mean more design iteration before it's stampable.
- A lofted, open-web section like this often needs more structural engineering than a simple shed.

Takeoff / Estimate (Materials, Labor, etc.)

This depends heavily on when you get it:

Type	Typical cost	Accuracy
Rough conceptual estimate (from concept dims like this)	\$500 – \$1,500, or free with a builder bid	±20–30%
Detailed takeoff (from a completed CD set)	\$1,500 – \$4,000 (often free if GC bids the job)	±5–10%

Most GCs will do the detailed takeoff for free if they're bidding the job — the paid version is mainly for owners who want an independent third-party estimate before hiring a contractor.

For reference, all-in construction cost for a project like this in Atlanta typically lands around \$180–\$350/sq ft, so at roughly 900 sq ft you're looking at approximately \$160,000–\$315,000 for construction alone, on top of the design/permit numbers above.

Note: This concept set is stamped AddPad — these figures are general Atlanta-market ranges, not an official quote from that firm. Confirm directly with them, especially given the unresolved items noted above (facade, doors, final

height, weatherproofing detail).
